System Stream
powered by PAAS360

What We Do

System Stream expense reduction and recovery solutions for technology are powered by PAAS360, the proven leading platform in technology spend analytics. Combining actual benchmark technology data, a team of negotiation experts, and an unrivaled supplier network allows us to help you achieve optimal technology pricing and terms.

Our expertise, platform, and guidance delivers <u>15-30% savings on technology agreements</u>.

Our Team

With experience working for prominent technology suppliers such as Oracle, Microsoft, Salesforce, IBM, Dell, CA, SoftwareONE, Presidio, Cisco, EMC, SAP, VMware, and others, our executive team offers a robust procurement knowledgebase and a network of executive-level technology supplier relationships.

We bring experience negotiating $20B+ in technology agreements and a unique combination of expertise in procurement, analytics, finance, and sales.

Spend Analytics Platform

PAAS360 is an AI and machine learning SaaS-based platform that provides benchmarking insights to identify suppliers with whom you can potentially achieve savings. The platform includes the profile of 5,000+ unique technology suppliers and consulting companies and 150M+ data points to help accelerate, identify, and quantify areas for savings. The platform is secure and compliant with SOC 2, GDPR, and PCI requirements, and offers 98 API's to automate and streamline data sharing. We can leverage this platform to produce a benchmark analysis within 24-48 hours because we understand that immediate savings is critical.

5,000+ Unique Technology Supplier Profiles • 150M+ Data Points • Actual (Never Survey) Data

4 Strategic Modules

Spend Analysis
Identifies spending trends and savings opportunities across multiple categories of spend. This level of data analysis can only come from proper data preparation and ingestion into well-architected autonomous databases.

Contract Management
Analyzes various licensing metrics and costs to a depth no other platform can match. This level of contract intelligence assists in more favorable negotiation at renewal time.

Forecast
Identifies specific projects that will produce substantial savings. These savings are then tracked against business units, departments, budgets, or cost centers.

Benchmark
Estimates indirect spend category and line item savings as well as intelligent improvement opportunities and recommended actions.
